ACTONOMY CORE

The fastest route to

Getting a proof of concept into production means connecting it to real systems and making it reliable at scale — security, performance, observability, cost. Actonomy Core handles that work.

Use pre-configured services, add your own, and go live in your own cloud tenant.

HOW IT WORKS

01
Adaptable to your needs
Deploy pre-configured services via the SDK, or define your own — combining the platform, AI, data and UI components each application needs.

02
Configurable platform
Specify requirements in manifest files. Actonomy Core uses these to configure deployment for your application.

03
Built to scale
Governance, security and monitoring ship with every deployment, and stay in place as you extend it and add users.

04
Your AI in production
Run it live in your own cloud tenant. Inspect the code, monitor behaviour, and extend it as requirements change.

CORE COMPONENTS

Actonomy Core
THE PLATFORM

Agent Core
Agents · model-driven

Model Core
Task-specific SLMs

Data Core
Workflows · data services

ACTONOMY CORE — WHY IT WORKS

PRODUCTION AI EXPERIENCE

AI SUPPLIER, UK PUBLIC SECTOR

SINCE 2018

MICROSOFT AI PARTNER OF THE YEAR

Up to 75% faster deployment to production

THE ACTONOMY CORE ADVANTAGE

WHY USE ACTONOMY CORE? · ONE PLATFORM · ONE LICENCE · FULLY SUPPORTED

One platform, one licence	Services are available together and supported by Actonomy, reducing what your team must integrate and maintain.
Governance included	Security, governance and observability are built in. Every agent is tested over 1,000 ways before deployment.
Less to build from scratch	Reuse existing services and workflows across applications — spend time on the use case, not infrastructure.
Already proven	We run our own production applications on Actonomy Core — the same capabilities available to your team.

BUILT WITH

Microsoft · NVIDIA · ANTHROP\C · databricks

FROM OUR CTO

"Getting AI to production usually means rebuilding the same integration, governance, and monitoring for every project. Actonomy Core ships that as one platform in your own cloud tenant, so you keep control of your code and data while reaching production far faster."

Alistair Stoops
CHIEF TECHNOLOGY OFFICER, ACTONOMY
